

SAP GST SOLUTION FOR RETAIL INDUSTRY - PRIVATE CLOUD INFRASTRUCTURE

Our SAP solutions help predict, anticipate, and deliver engaging shopper experiences. These solutions provide insights that empower retailers to get the right products to the right customers in the moment of demand. Retail solutions from SAP, based on the SAP HANA platform and available in the cloud, let retailers run on one unified platform with a single real-time view into the customer and the business to optimize retail processes and deliver seamless customer experiences

SAP solutions help retail companies increase revenue, profitability and market share through:

- More-targeted assortments, relevant promotions, and seamless shopping experiences.
- More-efficient supply chains and supplier networks that help ensure flexible supply at optimum cost.

GST STARTER PACK – CLOUD

CROSS INDUSTRY

The proposed Goods & Services Tax (GST), recently cleared for implementation in 2017 will be positive for the Indian Cross Industry. Benefits from improved transparency and ease of doing business would also improve supply chain efficiency over the longer term. The modus operandi of implementation of GST could have a short-term impact on the cash flow cycle pertaining to payment of indirect taxes; under the GST system, updation / reconciliation and payment by the seller on the GST network system would be required before the buyer can avail input-tax credit, effectively elongating the working capital cycle related to indirect tax payments
